FOR IMMEDIATE RELEASE

400 Stockholm Buses to Get Icomera X Series Platform

Icomera and its application partner Swedish Connection AB deliver an open application platform with IP video surveillance to Nobina AB for 400 buses in Stockholm, Sweden.

Göteborg, Sweden, April 8th 2011 – Icomera, the world's leading provider of open Internet connectivity and application platforms, announces that it will deliver its X Series routers to Nobina AB for installation on 400 buses in the Stockholm area.

The system includes an IP video surveillance application from the Icomera application partner Swedish Connection AB, with full support for local storage, remote viewing and full video offloading. The video management system includes a viewing station software with synchronised video display support. Through the system, the Swedish police will be able to search and select in the recorded data and download GPS tagged video footage directly over the Internet. Nobina will also use the system to provide Internet services for passengers on selected routes.

“By investing in an open application and connectivity platform, we are laying the foundation for future services” says Claes Herlitz, Director IT at Nobina. “IP video surveillance is the first application, but we have a list of services we want to add, such as service and maintenance planning. The platform will enable us to perform service upgrades without having to take buses out of service.”

As part of the project, the application Observit VVR from Swedish Connection will be installed on the platform. “Icomera has proven very easy to work with, both technically and on the personal level”, says Sune Sundell, CEO of Swedish Connection. “It took us just a few hours to put our applications on the Icomera X6 and the interfaces in the Icomera platform are clear and simple to integrate against.”

“This deal is truly ground braking”, says Roger Sandén, CEO of Icomera. “Nobina is showing great foresightedness when they focus on getting the platform in place to increase their freedom to rapidly and cost efficiently innovate on services.”

The installation of the 400 systems will be completed in time for the start of the next school year in September 2011.

About Icomera

Icomera launched the world's first high-speed Internet solution for trains in September 2002 and is today the world's leading provider of open Internet connectivity and application platforms for passenger transport and public safety. Our award-winning products are deployed on rail, road and sea, serving more than 15 million Wi-Fi users in over 20 countries and providing high-speed access for fleet tracking and mission-critical on-board systems.

Transport solutions of the future will require more than connectivity - passengers need to be entertained, the vehicles need to be monitored and the staff need to be kept informed. Together with our application partners Icomera is already meeting these and other needs through the deployment of complete transportation communication solutions.

Established in 1999, Icomera is headquartered in Sweden with office in the United Kingdom and channel partners worldwide. For more information visit <http://www.icomera.com>.
